

SUGGESTIONS FOR RARITONE

Raritone Summer Internship 2026

Introduction

During the internship, various AI-powered fashion technologies were researched, including Virtual Try-On Systems, Computer Vision models, Recommendation Engines, and AR/VR-based shopping experiences. Based on the research findings, several suggestions have been identified that may help enhance the Raritone platform and improve user engagement, personalization, and overall shopping experience.

1. Introduce Smart Size Recommendation

One of the major challenges in online fashion shopping is selecting the correct clothing size. Integrating AI-based body measurement estimation and size prediction can help users choose products more confidently.

Benefits:

- Better fitting recommendations
- Reduced return rates
- Improved customer satisfaction
- Personalized shopping experience

2. Develop a Personalized Fashion Profile

Allow users to create a fashion profile based on their preferences, favorite styles, colors, and shopping interests.

Benefits:

- Customized recommendations
- Improved product discovery
- Better user engagement
- Enhanced personalization

3. Expand Virtual Try-On Features

Future versions of the platform can support a wider range of products beyond clothing.

Potential Categories:

- Footwear
- Watches
- Jewellery
- Handbags
- Accessories

Benefits:

- Increased user interaction
- Better product visualization
- More comprehensive shopping experience

4. Integrate Real-Time AR Experiences

Augmented Reality can provide users with a more interactive shopping experience through mobile devices.

Applications:

- Virtual clothing trials
- Accessory placement
- Real-time product previews

Benefits:

- Enhanced customer confidence
- More engaging platform experience
- Improved product understanding

5. Improve Fashion Recommendation Accuracy

Recommendation systems can become more effective by considering additional factors such as user behavior, seasonal trends, and fashion preferences.

Suggested Improvements:

- Trend-aware recommendations
- Personalized outfit suggestions
- Hybrid recommendation models

- Context-based recommendations

Benefits:

- Higher recommendation relevance
- Better customer retention
- Increased user satisfaction

6. Build an AI-Based Outfit Planner

An intelligent outfit planner could help users create complete outfits rather than selecting individual products.

Features:

- Outfit matching suggestions
- Color coordination assistance
- Occasion-based recommendations
- Wardrobe planning support

Benefits:

- Improved user experience
- Increased product exploration
- Better fashion guidance

7. Enhance Mobile Platform Experience

Since many users prefer mobile shopping, optimizing AI features for mobile devices can improve accessibility.

Suggestions:

- Faster loading times
- Mobile-friendly virtual try-on
- Lightweight AI models
- Better interface design

Benefits:

- Improved convenience
- Increased platform usage
- Better user retention

8. Strengthen Dataset Collection

Future AI models can benefit from larger and more diverse datasets.

Areas of Focus:

- Different body types
- Multiple clothing categories
- Diverse fashion styles
- Various pose conditions

Benefits:

- Improved model accuracy
- Better generalization
- Enhanced personalization

9. Create Interactive Fashion Insights

Providing users with fashion insights and trend analysis can make the platform more informative.

Examples:

- Trending outfits
- Seasonal fashion recommendations
- Popular clothing categories
- Style inspiration suggestions

Benefits:

- Increased engagement
- Better shopping decisions
- Improved user experience

10. Focus on Scalability and Future Growth

As the platform grows, scalable AI infrastructure will become increasingly important.

Recommendations:

- Cloud-based AI deployment
- Efficient model optimization

- Faster processing pipelines
- Scalable system architecture

Benefits:

- Improved platform performance
- Better user experience
- Support for larger user bases

Conclusion

Raritone has strong potential to leverage Artificial Intelligence, Computer Vision, and AR/VR technologies to create innovative fashion experiences. By focusing on personalization, virtual try-on enhancements, recommendation quality, and user engagement, the platform can continue evolving into a smarter and more interactive fashion ecosystem.

The suggestions presented in this report are intended to support future development efforts and contribute to creating a more personalized, efficient, and enjoyable shopping experience for users.
